

Storage and server solutions for SMBs

Which storage and server solutions do more SMBs rely on for performance, reliability and security?

Kingston delivered the first fully secure, 100% privacy USB drives with 128-bit hardware-based encryption. Today, our 256-bit hardware encryption continues to redefine solid-state drives (SSDs) and memory to meet business demands.

Kingston Technology is the name they trust.

Small and midsize companies in every industry know they can count on Kingston storage and server solutions to meet their specific business requirements.

Whatever the price range or storage capacity, each product we offer meets the strictest criteria for quality, reliability and performance— world-renowned standards we've upheld for more than 30 years.

Built-in security and peace of mind.

We at Kingston Technology understand the ever-increasing importance of information security to SMBs. Studies show that the incidence of data breaches is highest among small and midsize businesses, and SMBs face costs of up to \$2.5 million* after a data breach. It's not surprising that 60% of small and midsize companies are forced to go out of business after a cyberattack.**

That's why we build in threat-protection features to help mitigate risks and complement a company's security infrastructure—and offer protection both inside and outside the firewall.

Storage and server solutions for SMBs

SSDs for laptops, desktops and servers

Whether a company needs to add speed to an existing PC or upgrade from a hard disk drive (HDD), Kingston offers a range of SSDs to choose from. Our fast and reliable SATA and NVMe SSDs are an ideal choice for new PC builds, servers and system builds.

USB flash drives

Kingston DataTraveler and IronKey USB flash drives provide on-the-go file storage for a variety of purposes, offering SMBs convenience and security in the office, at home or on the road—for everything from spreadsheets and sales reports to customer presentations and employee reviews. They're available in either standard or encrypted security.

Server Memory

Kingston invests extensive resources in the development and testing of its modules to ensure the outstanding performance, stability, long-term reliability and low TCO that make Kingston memory the industry standard worldwide. With Kingston's built-in security features, SMBs now have peace of mind that their data—the lifeblood of their business—is protected.

More than just storage and server solutions

All Kingston products are backed by the support of a company with a 30+ year track record of product reliability and a commitment to our customers.

- Hassle-free return policy
- Product configurator with the industry's most extensive database of memory products
- KingstonCare with 24/7 tech support
- Rigorous product testing
